Profile

AI writes great code now. Well, so do I, but it's the least valuable thing I have to offer. I have worked on startup teams across fintech, social, and agritech, building mobile apps, desktop apps and training AI models, and that experience has taught me to think beyond just the coding task in front of me (which AI can thankfully handle now) to what the market truly needs, what a customer is really asking for, which technical decisions will still make sense several months/years down the line, and which need to change. The greatest products are never truly finished - they keep adapting as people's needs change. First-class Computer Science graduate; writing programs since 2019, building mobile apps since 2022, with backends of my own in Go and Python; 10+ apps worked on, 5 shipped to production and one in testing, 7k+ downloads across stores.

Experience

Eleven36

DEC 2025 - SEP 2026

Mobile App Developer

- Built Cloutt, a creator platform now live on Google Play: AR-filtered live streaming (DeepAR frames piped into Agora RTC through bridge plugins I open-sourced), a virtual-gift economy with wallet top-ups and withdrawals, and realtime chat and presence over Socket.IO.
- Built SecuRent, a rental platform for the Nigerian market: tenant vetting and KYC, rent payments and disputes, PDF rent receipts, and landlord-tenant messaging end-to-end encrypted with the Signal Protocol on custom Hive-backed key stores.

Balancc

MAY 2025 - NOV 2025

Mobile App Developer

- Built significant parts of the Balancc Flutter app (financial insights; in testing) across 13 feature modules: accounts, budgets, transactions, and insights.
- Background sync with WorkManager and foreground services, home-screen widgets, dual charting stack, Shorebird over-the-air patching, biometric lock and jailbreak detection.

Bakkaz Information & Technology

MAY 2024 - JUN 2025

Mobile App Developer

- Shipped RecenthPost (social platform; 1,000+ downloads, 5.0★ on Google Play) - live streaming, Socket.IO chat, and end-to-end voice messages.
- Shipped Errandaar (two-sided errand marketplace; 5,000+ downloads, live on both stores) - realtime posting, chat and order tracking, client-side AWS Signature V4 uploads, face-verification KYC.

Farm Monitor

FEB - JUN 2024

Mobile App Developer

- Farmer-side features for Farm Monitor (agro monitoring platform; 1,000+ downloads, 4.3★): offline-first field data over SQLite, satellite field mapping with Google Maps, localization in English, Hausa, Igbo, and Yoruba.

Full-stack and independent work

- Kanban Boards** (2025, full stack) - Jira-style project boards with a Go API (Gin, GORM, PostgreSQL on Neon) deployed on Fly.io: JWT auth and 2FA, Paystack subscription billing with an auto-renewal worker, plan-based access, and the Flutter client; GitHub.
- DripoolPay** (2024, built entirely solo) - bills-and-wallet fintech app; custom PIN keypad, biometric unlock, encrypted storage; 4.7★ on Google Play.
- Empire Pay** (2024) - crypto and gift-card trading app.
- Exam Verifier** (2023, final-year B.Sc project) - scans the QR code on an exam pass and pulls up the authentic pass to verify it; Firebase Auth, Storage and App Check; GitHub.
- WETool** (2023) - weight-equalization app for farmers with full custom-backend auth.

- **Friends** (2022) - personal CRM with WhatsApp-deep-linked birthday reminders.
- **WhatsApp investor assistant** (2020, Python) - Flask app on Twilio's WhatsApp webhooks, deployed on PythonAnywhere: password-gated admin commands, investor records and stats, MOU documents generated as PDFs and sent over WhatsApp, and monthly charts; GitHub.
- **Django website** (2020, Python) - multi-page Django 2.2 site: an Achievements page that pulls posts and images from the database, content managed through the Django admin with image uploads, and About and Contact pages on shared templates; GitHub.

AI engineering

- QLoRA fine-tuned Qwen2.5-Math-1.5B for step-by-step tutoring on a self-built NCERT + Orca-Math + MetaMathQA dataset; GSM8K and MATH held out as benchmarks with baseline-vs-finetuned evaluation.
- Built and published the Yoruba Academic Wikipedia QA dataset on Hugging Face and fine-tuned Qwen2.5-1.5B on it - low-resource-language NLP.
- Writing a series on running LLMs locally in Flutter apps - on Android and in desktop apps (Windows/macOS/Linux) (Hashnode, 2026): QLoRA fine-tuning, GGUF quantization, and on-device integration.

Open source

- `openvino_genai` and `openvino_genai_windows` - on-device LLM and VLM inference for Flutter via Intel OpenVINO GenAI: streaming chat and image description on CPU/GPU, pinned SHA-256-verified runtime.
- Four AR live-streaming plugins: `flutter_deepar`, `flutter_deepar_agora`, `flutter_banuba_ar`, `flutter_banuba_agora_ar` - camera capture, AR effects, and processed-frame bridges into Agora RTC.

Education and courses

B.Sc. Computer Science - Federal University of Agriculture, Abeokuta

DEC 2023

First-Class Honours - Best Graduating Student in the Department.

Machine Learning Specialization, DeepLearning.AI (2025) · Flutter & Dart - The Complete Guide, Udemy (2023) ·

Mathematics for Machine Learning, Imperial College London (2020) · Complete Python 3, Udemy (2020)

Skills

Mobile Flutter · Dart · Kotlin & Swift (native platform plugins) · FFI / C interop · BLoC · Riverpod · Provider · Clean Architecture

Backend Go (Gin, GORM) · Python (Flask, Django) · PostgreSQL (Neon) · REST API design · JWT auth & 2FA · webhooks · background workers · Fly.io and PythonAnywhere deploys

Integration REST (Dio) · WebSockets / Socket.IO · Firebase (Auth, FCM, Crashlytics) · Sentry · Google Maps · Paystack · SQLite · Hive · Isar · SQL

Delivery Git / GitHub · GitHub Actions · Fastlane · Shorebird OTA · unit & widget tests · App Store and Google Play releases · Docker

AI Python · PyTorch · QLoRA / Unsloth / PEFT / TRL · Hugging Face · OpenVINO · ONNX Runtime · JavaScript
